

Barvy a přehled typů

Dlaždice jsou neglazované. Vzor tvoří barevná hmota ručně vrstvená do formy podle tvaru ornamentů. Hmota se barví zatíráním pigmentů za mokra, barevnost je podobná starým dlažbám. Stejný typ dlaždice může být vyrobený v různých barvách, dlaždice stejného formátu se mohou vzájemně kombinovat.

Většinu vzorů je možné sestavit z několika barev:

1. přírodní bílá
2. černá
3. červenohnědá
4. okrově žlutá
5. modrá
6. zelená
7. hnědá

Další odstíny hmot lze připravit...

Vyladění odstínů hmot pro výrobu věrnějších kopií dlaždic vyžaduje čas, protože barevný výsledek zkoušek se projeví až po výpalu. Receptury se musí pak znovu ověřovat po každé změně složení surovin.
